Sheet 7

1)

a)

File
<ul style="list-style-type: none">- FileName: String- FileSize: Long- CreateAt: Date- Permission: String- owner: User- Parent: File- lastmodified: Date
<ul style="list-style-type: none">+ getter, setter+ open(): void+ close(): void+ write(): boolean+ read(): String+ Lock():

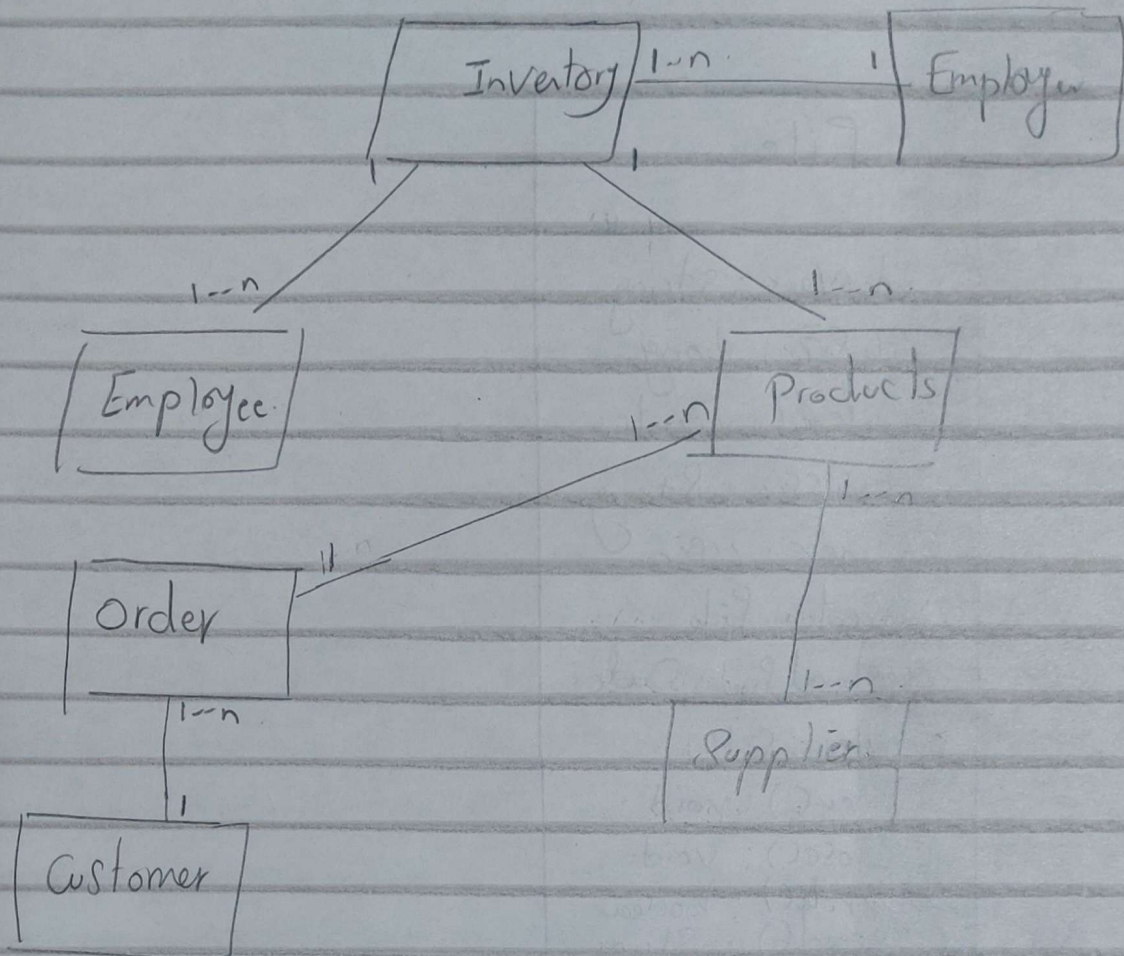

b)

LoadJob
<ul style="list-style-type: none">- File: File- Path: String- buffer: Buffer
<ul style="list-style-type: none">+ getter, setter+ getFibintomemory()+ returnfile(): void

c)

PlayingTrack
<ul style="list-style-type: none">- TrackName: String- Content: Byte[]- Artist: String- duration: int
<ul style="list-style-type: none">+ getter, setter+ Play(): Byte[]+ Stop(): void

2)

3)

Classes so

- use design patterns.
- Solid Principles
- inheritance
- Encapsulation
- Polymorphism.
- Abstraction

Methods so

- Naming Convention
- Single Functionality
- Short
- not nested inclusion.

Variable so

- not use magic number.
- boolean var not preferable.
- naming Convention
- decrease Life time, Scope.

11)

a) Bank

use case

functional req.

Authentication System

System routing to agent

Chat between agent, Customer

non functional requirement

Security

response time

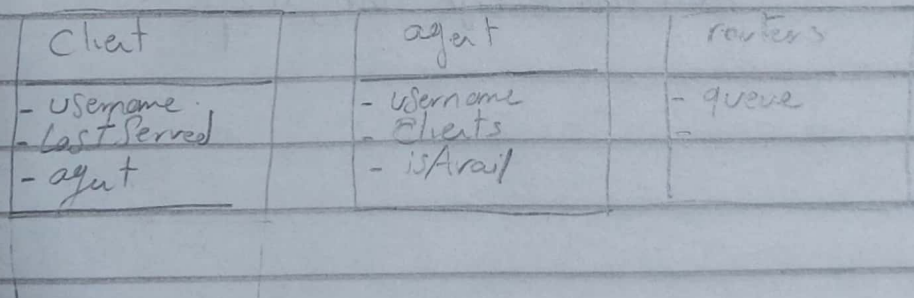

availability

Arch Desig

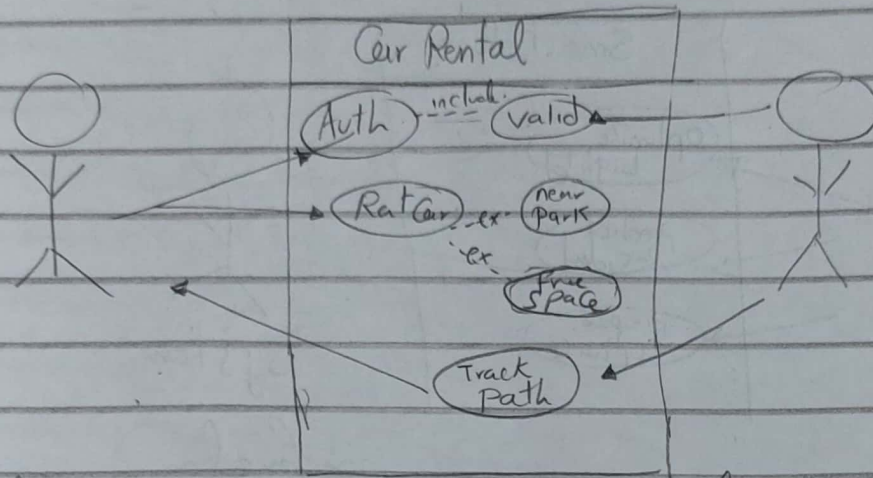

Layered Architecture

classDiagram

b) Car Rental Service. Use Case

functional

- get nearest parking
- rent Car.
- Tracking Path.
- Notification

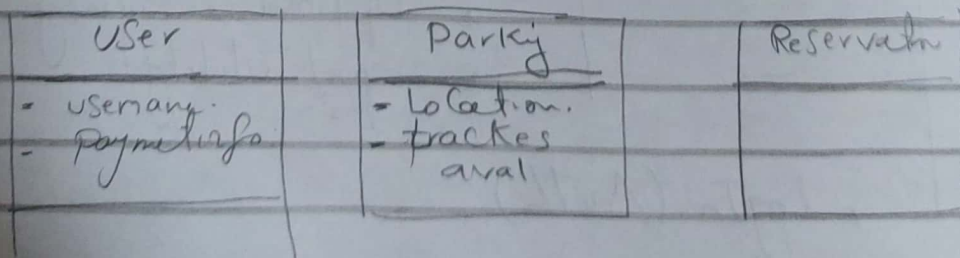

nonfunctional.

- Security
- response time

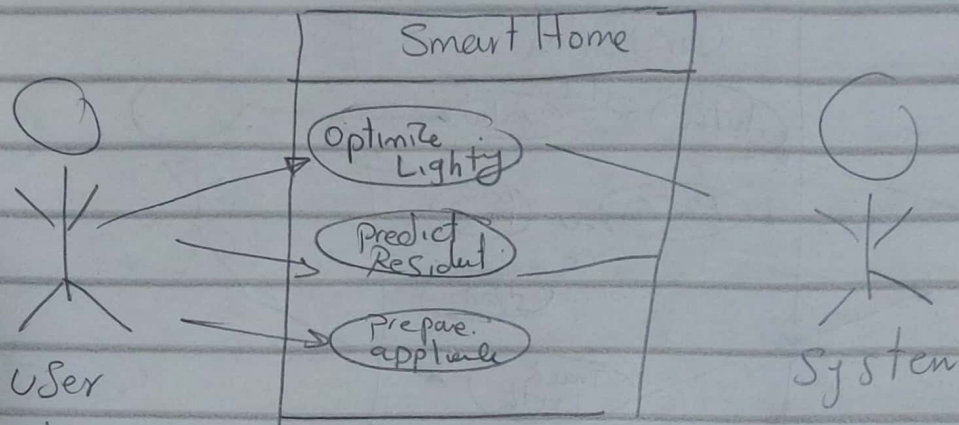

Architecture Design

Distributed Architecture. (Decentralized database)

Class diagram.

c) Smart home manager : use case

function

- Control appliance.
- Optimize lighting
- usage utility

non function

- Security
- Response time
- dependability
- Availability

Architecture

micro service architecture.

classes
